Addendum to *Read this first* supplement

This addendum supersedes part of page 4.

Acorn printer drivers release 1.22

Acorn printer drivers except PostScript:
Publisher prints deep-colour sprites (32 thousand or 16 million colours) as 256 colours with resultant quality loss. This is because Publisher performs its own separations for these sprites and this is incompatible with the way Acorn printer drivers work. Other graphics should print correctly.

Acorn colour PostScript printer drivers:
This release of software prints deep colour sprites correctly.

TurboDriver printer drivers:
TurboDrivers print deep colour sprites correctly. They are also significantly faster than the Acorn equivalents.
